

# CS4450 Lecture 35 Notes

Monday, November 12, 2018 3:02 PM

Today, we're going to write a type checker. The code will be available online. This will form the core of the type checker of the full language with procedures.

We'll be using the while language, with a little bit richer types.

We've got standard stuff (e.g. Name is a String)

Prog - Program (Prog) is a series (list) of variable declarations and a series (list) of statements
