

# CS4450 Lecture 19 Notes

Monday, October 1, 2018

3:21 PM

For the midterm, ensure you know how type signatures work. Make sure you know what a function looks like when it's an input parameter, what the different types mean, difference between `a` and `Num a`.

Between 15 and 23 questions on the midterm.

There are a few where you will write out the type definition, but most of them are multiple choice.

Wednesday, Tom Reynolds will teach (he's taught this class in the past) and will go over an old midterm with us.

A lot of the exam questions will be similar to the caliber of question 3 on HW3.
